

# CRUD CONCEPT IN CODEIGNITER

Author: Nanda Reynaldi

## GENERAL PURPOSE

1. Understanding CRUD Concept and Requirements
2. Able to create web application with Codeigniter Framework
3. Understanding the basic concept of web security

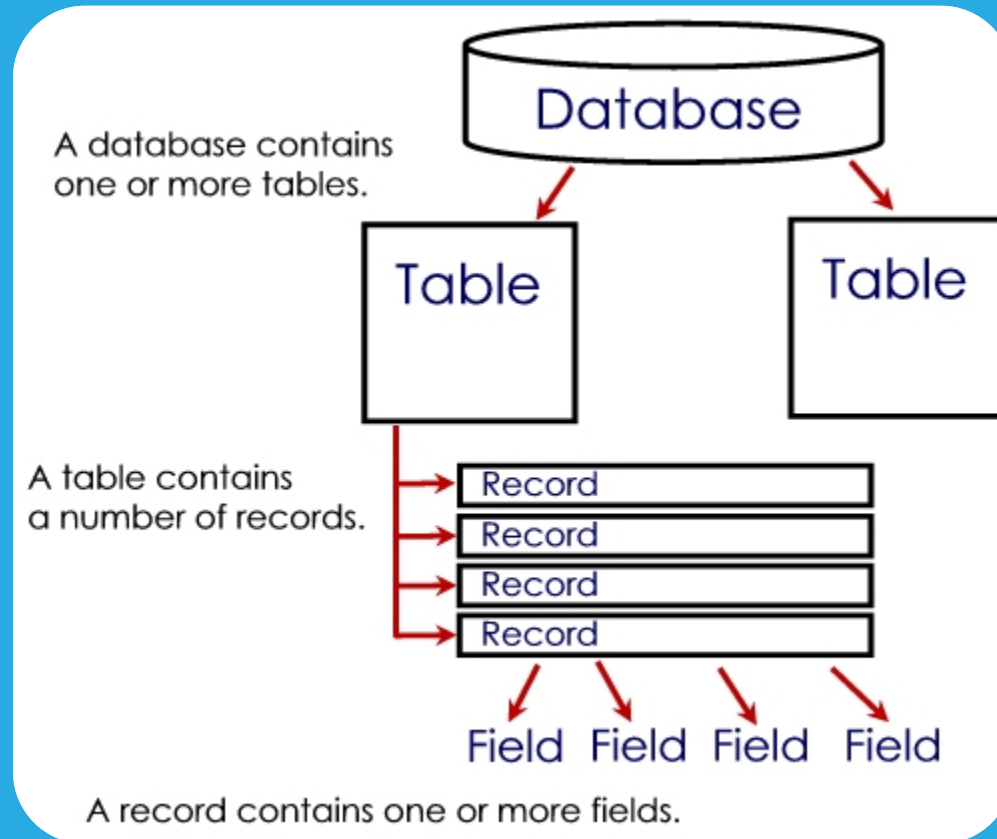

## PREPARATION

1. Download Latest project <http://s.id/kodingin1>
2. New XAMPP with PHP 7
3. Visual Studio Code / Sublime / Text Editor

# DATABASE AND QUERY BUILDER

# DB CONCEPTS OVERVIEW

A record contains one or more fields.

# DB DRIVER SUPPORT

Database Drive reference

[https://www.codeigniter.com/userguide3/database/db\\_driver\\_reference.html](https://www.codeigniter.com/userguide3/database/db_driver_reference.html)

# DATABASE CONFIGURATION

The config file is located at application/config/database.php

```
$db['default'] = array(
    'dsn' => '',
    'hostname' => 'localhost',
    'username' => 'root',
    'password' => '',
    'database' => 'avc_db',
    'dbdriver' => 'mysqli',
    'dbprefix' => '',
    'pconnect' => FALSE,
    'db_debug' => (ENVIRONMENT !== 'production'),
    'cache_on' => FALSE,
    'cachedir' => '',
    'char_set' => 'utf8',
    'dbcollat' => 'utf8_general_ci',
    'swap_pre' => '',
    'encrypt' => FALSE,
    'compress' => FALSE,
    'stricton' => FALSE,
    'failover' => array(),
    'save_queries' => TRUE
);
```

# QUERY BUILDER

Select Statement : `return $this->db->query("select * from config")->result_array();`

What Difference between row\_array and result\_array ?

# MORE EXAMPLE QUERY BUILDER

```
public function updatedata_avc($tabel,$data,$where){  
    return $this->db->update($tabel,$data,$where);  
}  
  
public function insertdata_avc($tabel, $data){  
    return $this->db->insert($tabel,$data);  
}
```

Parameter Binding

Get Data and SUM it

```
public function get_board($idc, $where = ''){  
    $this->db->select('user, date');  
    $this->db->select('SUM(point) as pts');  
    $this->db->from('user_points');  
    $this->db->where('id_challenge', $idc);  
    $this->db->group_by('id_usr');  
    $this->db->order_by('pts DESC');  
    $query = $this->db->get()->result_array();  
    return $query;  
}
```

# MORE EXAMPLE QUERY BUILDER

```
public function selectAll($nama_mitra){  
    $this->db->select('nama_lengkap, npm, foto, email1');  
    $this->db->from('alumni a');  
    $this->db->join('pengalaman b', 'b.id_usr=a.id', 'left');  
    $this->db->where('perusahaan', $nama_mitra);  
    $this->db->group_by('id_usr');  
    $query = $this->db->get()->result_array();  
    return $query;  
}
```

Join Left and Binding

Multiple Join Table

```
function get_data(){  
    $this->db->select('a.id, a.nama_lengkap, a.referal, a.tahun_join, b.id_usr as point, c.id_usr as data_member, d.id_usr as resume, e.id_usr as referal_data');  
    $this->db->from('member a');  
    $this->db->join('points b', 'b.id_usr=a.id', 'inner');  
    $this->db->join('data_member c', 'c.id_usr=a.id', 'inner');  
    $this->db->join('resume d', 'd.id_usr=a.id', 'inner');  
    $this->db->join('referal_data e', 'e.id_usr=a.id', 'inner');  
    $this->db->where('b.id_usr is NOT NULL');  
    $this->db->where('c.id_usr is NOT NULL');  
    $this->db->where('d.id_usr is NOT NULL');  
    $this->db->where('e.id_usr is NOT NULL');  
    $this->db->group_by('e.id_usr');  
    $query = $this->db->get();  
    $data = array();  
    if($query !== FALSE && $query->num_rows() > 0){  
        $data = $query->result_array();  
    }  
    return $data;  
}
```

Let's Practice It

# Section #1 Getting Data

## Section #2 Insert Data

## Section #3 Update Data

## Section #4 Delete Data

## Section #5 Security

Any Question ?

- THANK YOU -
